

ASX Announcement

30 November 2023

HIGH GRADE ASSAYS CONTINUE TO IMPRESS AT COLINA DEPOSIT

Colina Infill, Southwest Extension, and Deep drilling results expected to increase JORC Resource

HIGHLIGHTS

- Exceptional high-grade assays continue to flourish at the Company's Tier One Salinas Lithium Project.
- Upgrade of the current Colina Mineral Resource Estimate (MRE) (current MRE: 45.2Mt @ 1.32% Li₂O¹) is expected for a December 2023 release, following completion and receipt of all assay results from the latest resource expansion drilling program.
- Since the previous MRE release in June 2023, an additional 53 holes (for 23,617m) have been drilled at Colina Deposit and a total of 13 diamond drill holes for 4,575.7m have been completed at Fog's Block.
- Significant intercepts from the latest Colina Deposit resource expansion drilling program have been received. Highlights as follows:
 - SADD158: 15.70m @ 1.59% Li₂O from 206.09m
 - SADD158: 20.74m @ 1.42% Li₂O from 335.45m
 - SADD170: 17.54m @ 1.42% Li₂O from 350.53m
 - SADD184: 17.00m @ 1.55% Li₂O from 139.00m
 - SADD195: 13.56m @ 2.03% Li₂O from 98.44m
 - SADD195: 25.55m @ 1.57% Li₂O from 307.80m
 - SADD200: 16.98m @ 1.85% Li₂O from 235.54m
 - SADD201: 15.88m @ 1.27% Li₂O from 329.12m
 - SADD202: 26.85m @ 1.39% Li₂O from 260.75m
- Significant intercepts from the latest Fog's Block drilling program have been received. Highlights as follows:
 - MCDD007: 6.94m @ 1.13% Li₂O from 278.06m
 - MCDD008: 15.33m @ 1.03% Li₂O from 211.74m
 - MCDD009: 12.60m @ 1.15% Li₂O from 173.40m
 - MCDD009: 17.52m @ 1.48% Li₂O from 250.58m

¹ Refer to LRS's ASX Announcement dated 20 June 2023, entitled "241% Increase for the Colina Mineral Resource"

- At least 10-diamond drill rigs will continue to operate at Salinas Project through 2024, where the Company expects the Global JORC MRE to grow significantly by implementing the additional drilling program.

Latin Resources Limited (ASX: LRS) ("Latin" or "the Company") is pleased to provide an update on the Colina Deposit resource definition drilling program at the Company's 100% owned Salinas Lithium Project ("Salinas Project") in Brazil.

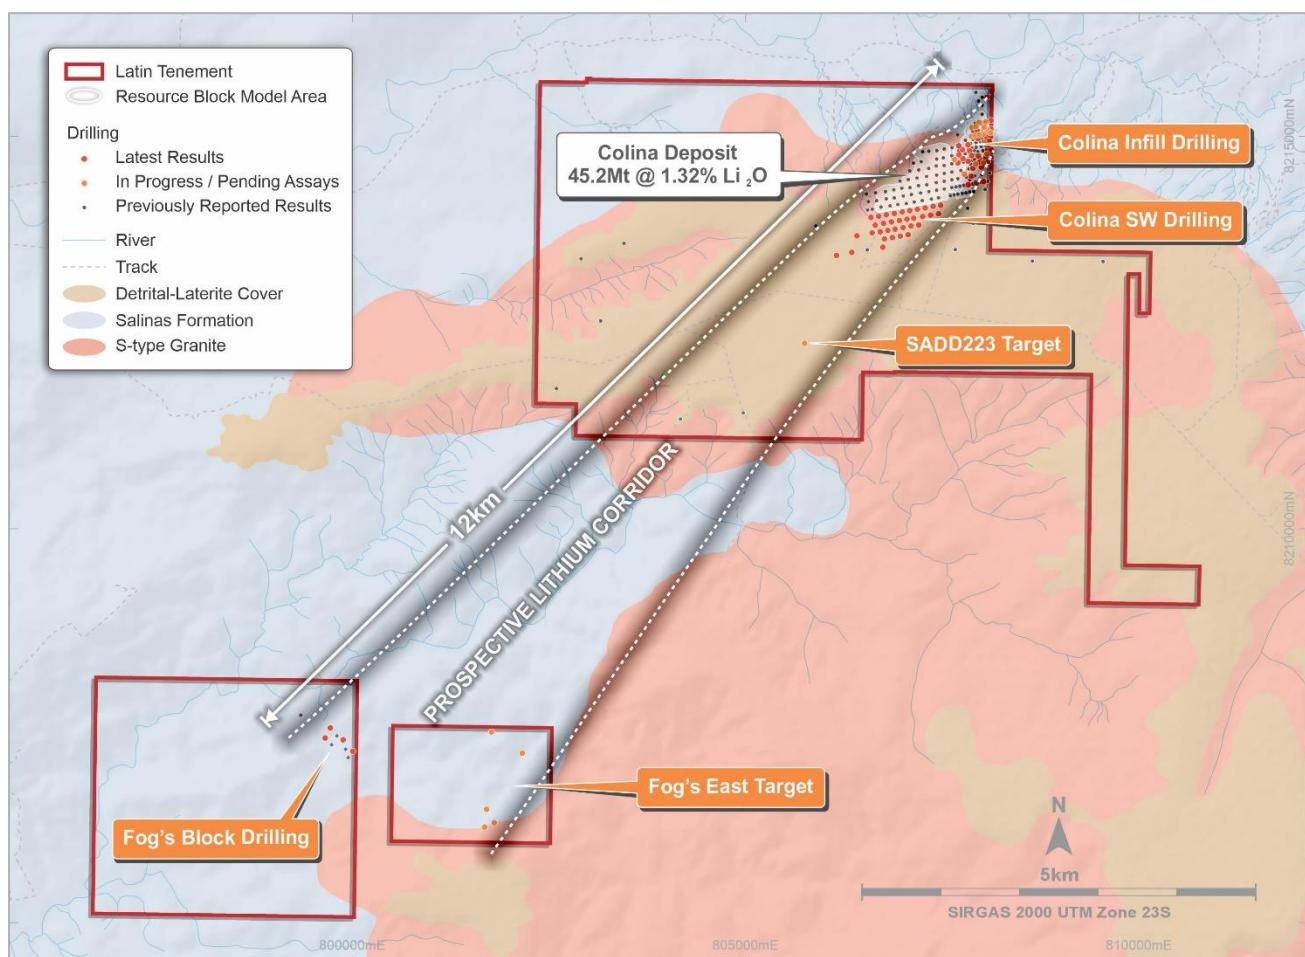

Figure 1: Colina Deposit plan, showing location of the Colina Extensional, Infill and Fog's Block drilling programs.

Latin Resources' Vice President of Operations - Americas, Tony Greenaway, commented:

"We continue to see solid results coming out of our drilling at Colina. This latest update represents a solid 5 months of drilling which was focused on extending the Colina Deposit to the southwest along the Salinas Lithium Corridor, as well as infilling parts of the existing resource model. The geology team on site have been working closely with our independent resource consultants SGS geological services to construct the new wireframes and compile all the necessary data to update our resource model which will form the basis of the DFS which is scheduled for completion in mid-2024."

Drilling has not stopped on site, with all ten rigs still turning. We have moved our focus to predominantly infill drilling within the new resource footprint, with the aim of increasing the resource classification to enable the declaration of mining reserves as a part of the DFS process."

SALINAS PROJECT- COLINA DEPOSIT

The latest round of assay results has been received from the Colina Deposit and Fog's Block drilling programs, where outstanding results continue to improve the mineralised footprint of the Colina Deposit and firms a new mineral resource potential at Fog's Block.

These ongoing drilling programs continue to yield more information about the possible scale, importance, and expansion possibilities of the Colina Deposit. Multiple high-grade intercepts have emerged beyond the current Colina MRE boundary, as well as along its margins.

10 rigs are currently operating on site undertaking the balance of the 65,000m diamond drill program throughout the remainder of 2023. Recently, the Company successfully raised \$35 million in an oversubscribed placement², where the use of funds, amongst other things will be used toward an expanded 2024 drilling program. The 2024 program will continue to increase tonnage and upgrade the confidence level in the current Colina MRE and to further identify and validate new priority drill targets at Colina and Fog's Block.

As part of this announcement, new drilling results are being released for the following drill programs currently being undertaken by the Company:

Colina Deposit	Colina Infill Diamond Drilling
	Colina Southwest Extension Diamond Drilling
	Colina Deep Drilling
	Colina Scout Drilling
	Colina Metallurgical Drilling
Fog's Block	Exploration Diamond Drilling

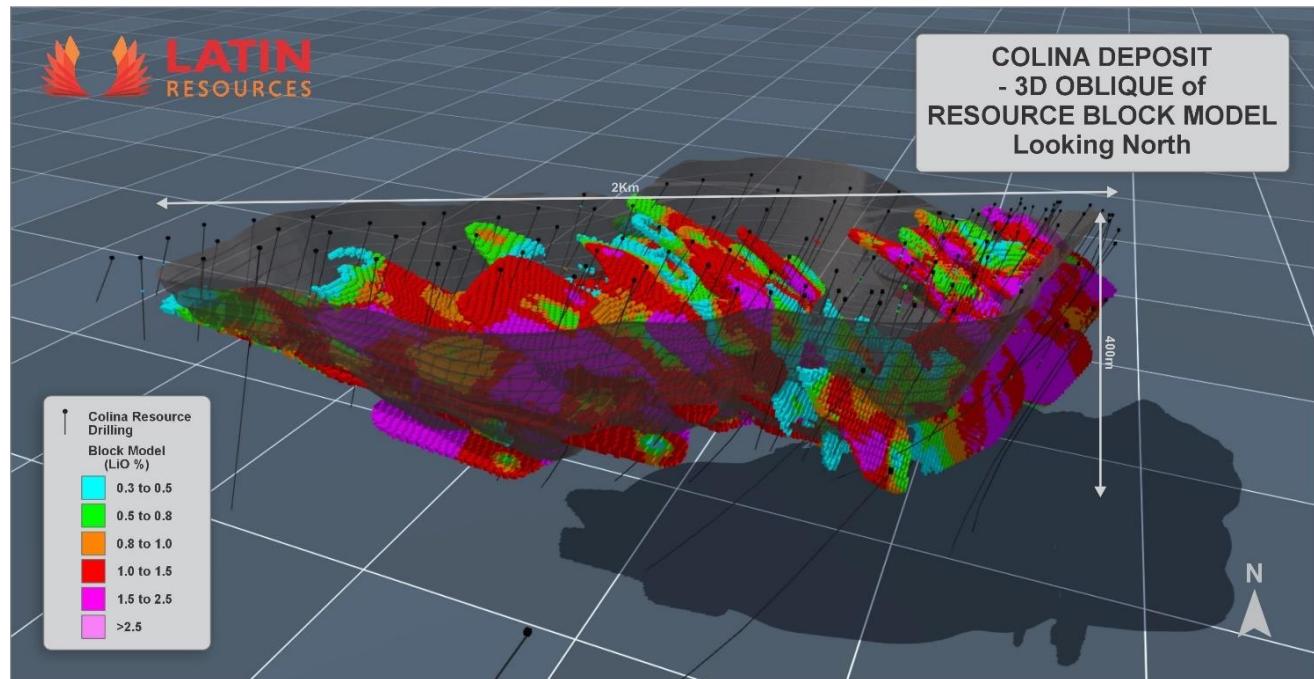

Figure 2: Current 45.2Mt Colina MRE¹ with mining pit shell and collar locations.

² Refer to LRS's ASX Announcement dated 23 October 2023, entitled "Latin Resources Receives Firm Commitments for a A\$35.0 Million Placement To Progress Exploration On Its Salinas Project"

COLINA DEPOSIT RESOURCE DEFINITION DRILLING PROGRAM- COMPLETE

The Company has now completed all drilling and received all assay results from the latest diamond resource definition drilling program at the Colina Deposit ("Resource Program"), which will be used in the upcoming Colina Mineral Resource Estimate ("Colina MRE").

The current Colina MRE released to the market on 20 June 2023 was based on 135 holes for 39,033m of drill core, with the previous December 2022 Maiden MRE based on 47 holes for 10,528m of drill core.

Since the Colina MRE released in June 2023, the Company has now completed a further 53 holes for 23,617m of drilling at Colina Deposit, bringing the total drill holes to 188 for approximately 62,650m of drill core.

Drilling was primarily concentrated on infill, extensional and deep drilling programs across the Colina Deposit with the focus on increasing tonnage and improving resource confidence at the Colina MRE (**Figure 3**):

- 47 drill holes were drilled across the infill and extensional drilling programs;
- 6 larger HQ diameter drill holes (**SADD158, SADD170, SADD184, SADD185, SADD195 and SADD200**) form part of the Colina Deposit Deep drilling program, which was designed to test the potential extents of the lithium mineralisation system at depth within the Colina MRE; and
- 7 drill holes (**SAMT001 to SAMT007**) form the Colina metallurgical diamond drilling program, which was undertaken to derive a representative bulk sample from selected mineralised and unmineralised zones across the Colina Deposit. The material will be used for further extensive test work on the Colina Deposit ore, notably used toward the Definitive Feasibility Study ("DFS"), scheduled for a mid- 2024 release. These 7 holes are separate to the 53 holes from the Resource Program.

Highlights of the significant drill intercepts from the above-mentioned programs are included in **Table 1** below.

For the complete collar and assay details that will comprise the Colina MRE upgrade, refer to **Appendix B and C**.

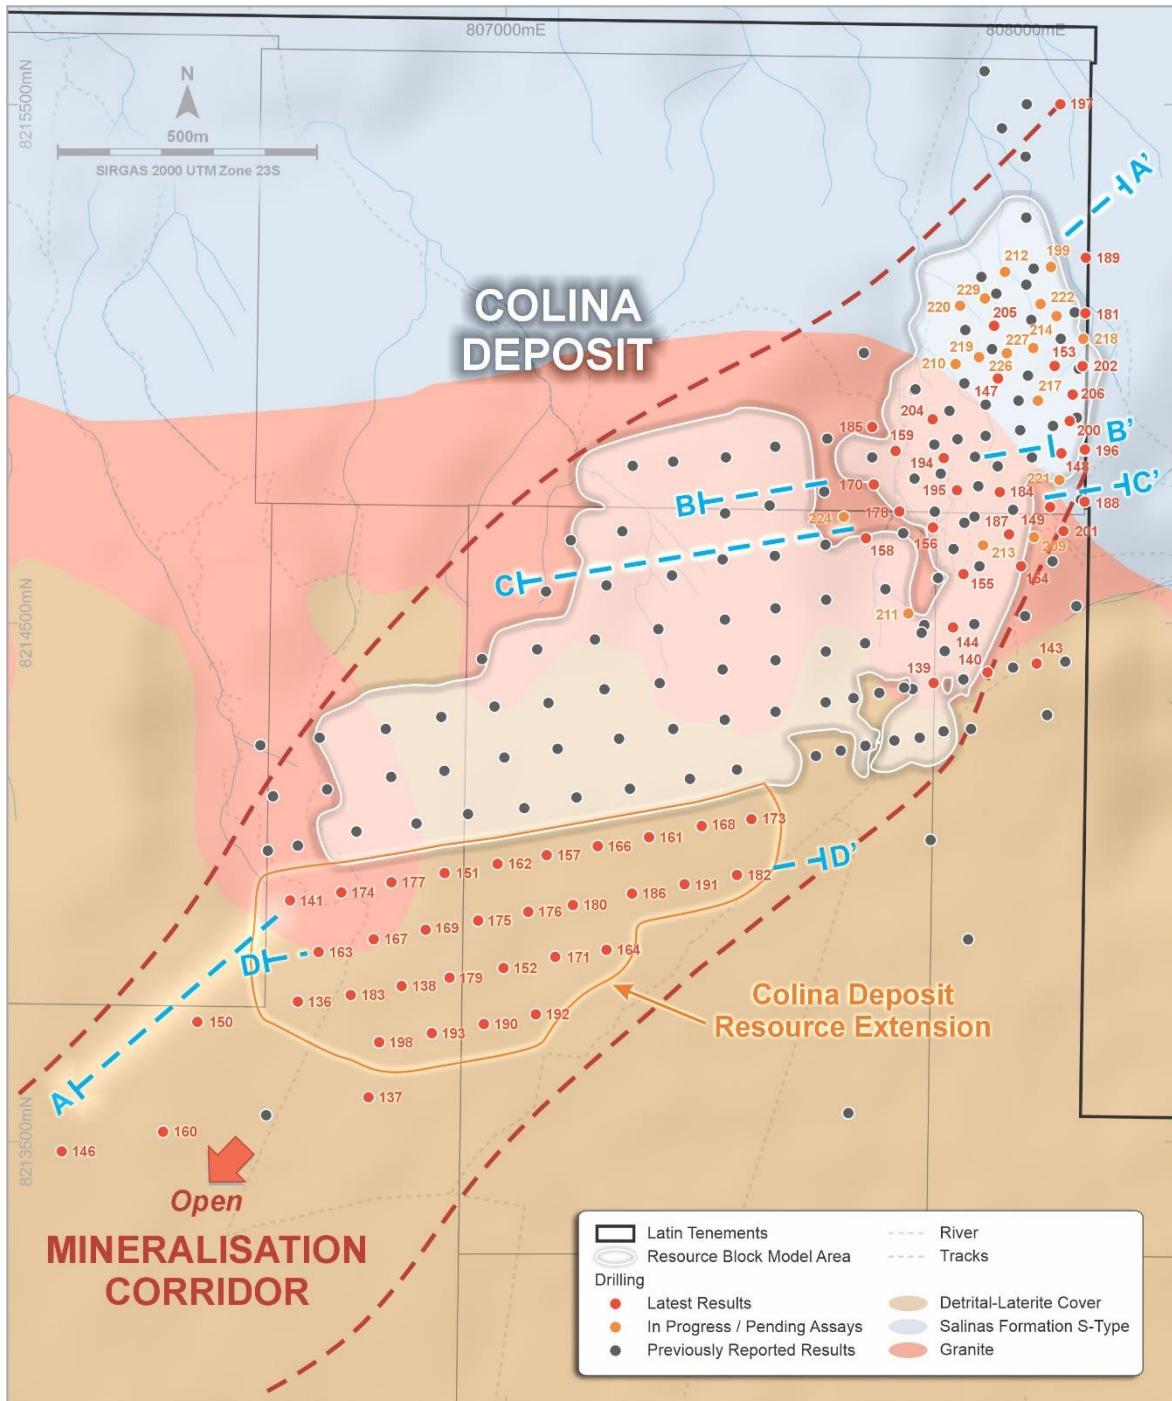

Figure 3: Location of Colina SW and Colina Infill drilling collars.

These additional assay results from the latest phase of Resource Drilling have continued to deliver both grade consistency and pegmatite continuity, with the Colina Deposit expected to grow significantly in size. To date, the intercepts encountered have improved the Company's understanding of the connectivity of the mineralisation between the Colina MRE itself and the extensional areas, showing further spodumene grade, quality and also consistency along strike and depth (see Figures 4, 5, 6 and 7 cross sections).

The results received from these programs will be incorporated into the upcoming Colina MRE update. The Company remains confident that the Colina MRE will grow in tonnage and improve resource confidence, with the Colina MRE update set to deliver a significant milestone for the Company with the Colina Deposit tracking toward a globally recognised tier 1 asset.

SGS Geological Services (“SGS”) in Canada has been appointed to undertake the independent update of the Colina MRE, which is expected to be completed in December 2023. SGS also undertook both the June 2023 and December 2022 Colina MRE’s.

The Company notes that the latest results are a phase of the broader continuous infill and extensional drilling program, with the key task of this program to deliver increased tonnes and resource confidence at Colina. Further MRE updates are anticipated throughout 2024.

Table 1: Significant drill intercepts from the Colina Infill, Extension, Deep and Metallurgical programs.

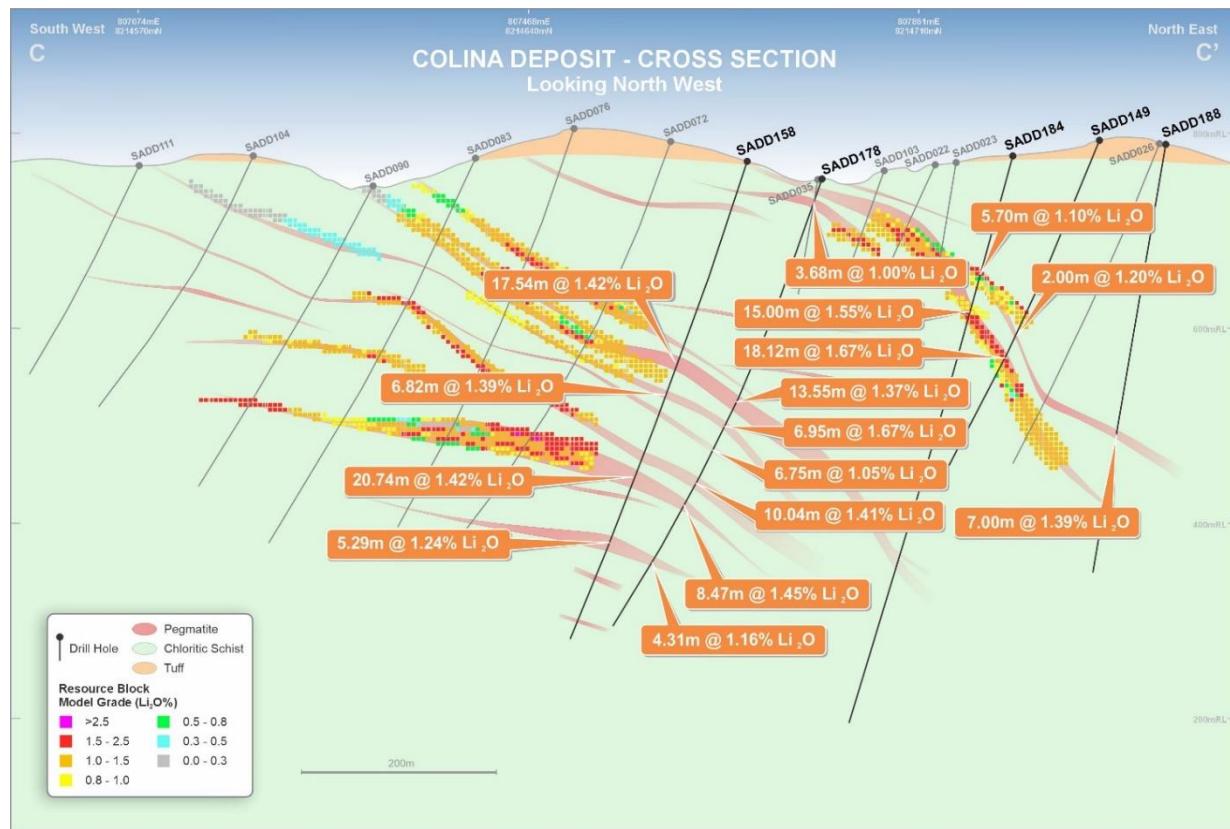

Figure 5: Sectional view ('C- C') of Colina Deposit looking northwest with new drilling results showing the growth in the resource with developing stacked pegmatites developing at depth (New collars in bold).

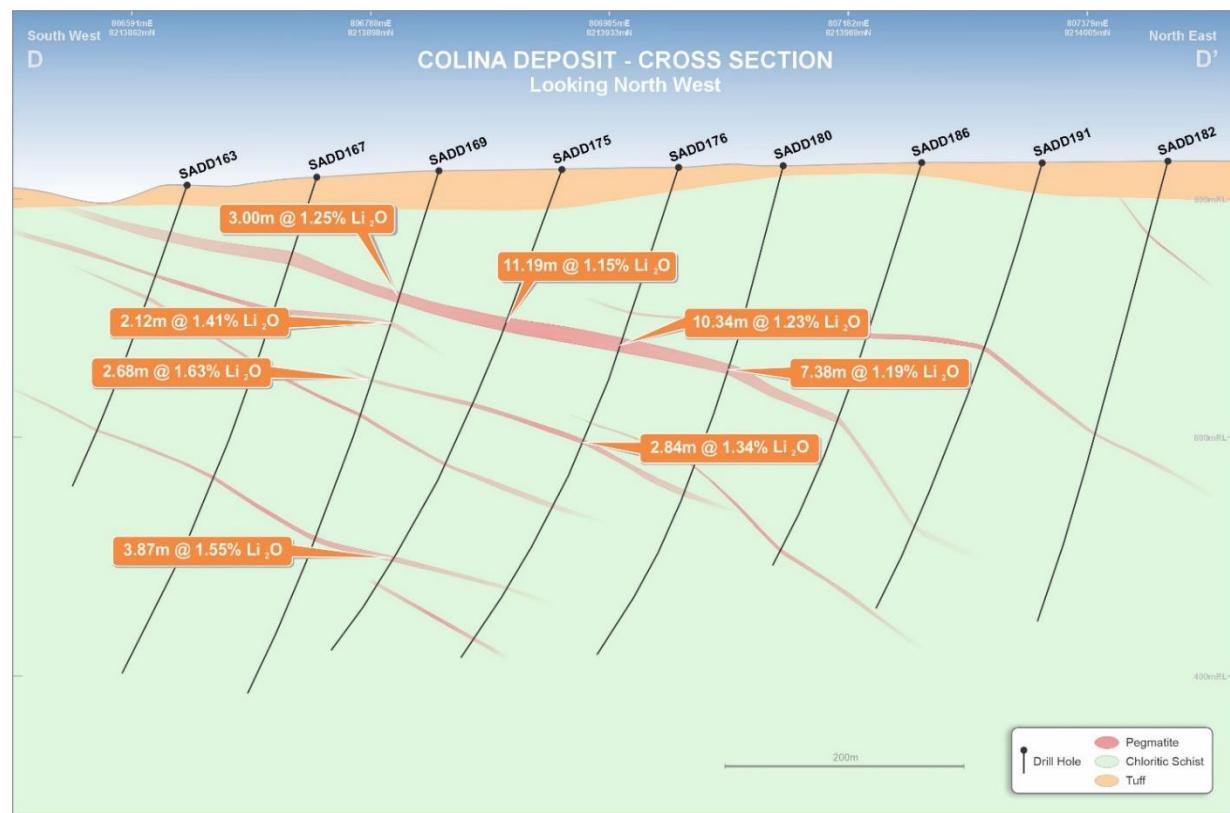

Figure 6: Sectional view ('D- D') of Colina Deposit looking northwest with new drilling results from the extensional drilling program showing the developing stacked pegmatites system (New collars in bold).

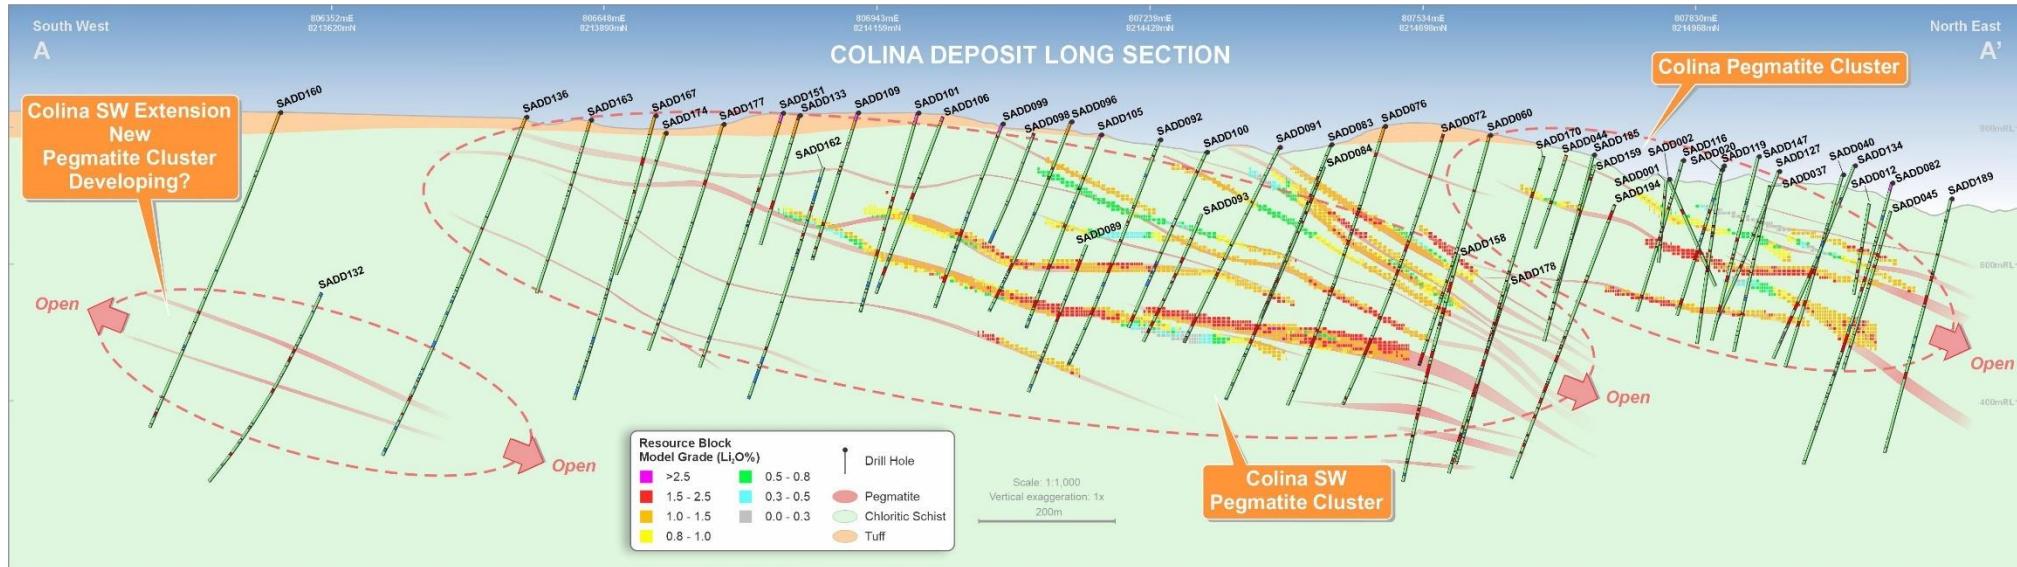

Figure 7: Long Sectional view ('SW- NE') through the Colina Deposit, indicating recent drill intercepts (**bold**) with current Colina MRE block model.

FOG'S BLOCK TARGET

Fog's Block target is located approximately 12km southwest of the Company's **45.2Mt Colina MRE¹** (**Figure 1**).

The Company has now completed a total of **13** holes for **4,575.7m** of drilling at Fog's Block (**Figure 8**).

Complete assay results have now been received for a further 3 holes (bringing the total to 9 assayed holes), with significant intercepts included in **Table 2** below.

The Company identifies Fog's Block as an important target in adding supporting resource tonnes to the Colina Deposit, improving the Global Resource and ultimately the Salinas Project economics.

The Company will continue to dedicate diamond drill resources to drilling the Fog's Block area where our mapping and other regional programs continue to identify new drilling targets. The Company will update the market on further assay results from completed holes once received.

For full collar and assay details from Fog's Block, refer to **Appendix B and D**.

³ Refer to LRS's ASX Announcement dated 20 June 2023, entitled "241% Increase for the Colina Mineral Resource".

About Latin Resources

Latin Resources Limited (ASX: LRS) is an Australian-based mineral exploration company, with projects in South America and Australia, that is developing mineral projects in commodities that progress global efforts towards Net Zero emissions.

The Company is focused on its flagship Salinas Lithium Project in the pro-mining district of Minas Gerais Brazil, where the Company has defined a total Mineral Resource Estimate at its Colina Lithium Deposit of 45.2Mt @ 1.32% Li₂O, reported above a cut-off of 0.5% Li₂O.*

*The classification of this JORC MRE includes **30.2Mt @ 1.4% Li₂O** of the total resource now sitting in the **Measured + Indicated category** (0.43Mt @ 1.34% Li₂O Measured + 29.7Mt @ 1.37% Li₂O Indicated) + 15.0Mt @ 1.22% Li₂O Inferred.*

*The Company recently defined a Preliminary Economic Assessment (PEA)** which contemplates a proposed 3.6Mtpa standalone mining and processing operation over two phases. where the economics show after-tax NPV8% of A\$3.6 billion (US\$2.5 billion) and combined after-tax IRR of 132%.*

Latin also holds the Catamarca Lithium Project in Argentina and through developing these assets, aims to become one of the key lithium players to feed the world's insatiable appetite for battery metals.

**For full details of the Colina Lithium Deposit MRE, please refer to ASX Announcement dated 20 June 2023.*

***For full details of the Colina Lithium Project PEA, please refer to ASX Announcement dated 28 September 2023.*

Competent Person Statement – Salinas Lithium Project

The information in this report that relates to Geological Data and Exploration Results for the Salinas Lithium Project is based on information compiled by Mr Anthony Greenaway, who is a Member of the Australian Institute of Mining and Metallurgy. Mr Greenaway sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Greenaway consents to the inclusion in this report of the matters based on his information, and information presented to him, in the form and context in which it appears.

The information in this report that relates the Mineral Resource Estimate for the Salinas Lithium Project are based on the information compiled by Mr Marc-Antoine Laporte M.Sc., P.Geo, who is an employee of SGS Canada Ltd and a member of the L'Ordre des Géologues du Québec. He is a Senior Geologist for the SGS Geological Services Group and as more than 15 years of experience in industrial mineral, base and precious metals exploration as well as Mineral Resource evaluation and reporting. Mr Laporte sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'.

Confirmation Statement – Colina Project Preliminary Economic Assessment

The production targets and forecast financial information disclosed in this Announcement is extracted from the Company's ASX announcement entitled "Robust Results for Colina Lithium Project Preliminary Economic Assessment (PEA)", dated 28 September 2023. The Company confirms all material assumptions underpinning the production targets and forecast financial information derived from the production targets in the initial announcement continue to apply and have not materially changed.

Forward-Looking Statement

This ASX announcement may include forward-looking statements. These forward-looking statements are not historical facts but rather are based on Latin Resources Ltd.'s current expectations, estimates and assumptions about the industry in which Latin Resources Ltd operates, and beliefs and assumptions regarding Latin Resources Ltd.'s future performance. Words such as "anticipates", "expects", "intends", "plans", "believes", "seeks", "estimates", "potential" and similar expressions are intended to identify forward-looking statements. Forward-looking statements are only predictions and are not guaranteed, and they are subject to known and unknown risks, uncertainties and assumptions, some of which are outside the control of Latin Resources Ltd. Past performance is not necessarily a guide to future performance and no representation or warranty is made as to the likelihood of achievement or reasonableness of any forward-looking statements or other forecast. Actual values, results or events may be materially different to those expressed or implied in this ASX announcement. Given these uncertainties, recipients are cautioned not to place reliance on forward looking statements. Any forward-looking statements in this announcement speak only at the date of issue of this announcement. Subject to any continuing obligations under applicable law and the ASX Listing Rules, Latin Resources Ltd does not undertake any obligation to update or revise any information or any of the forward-looking statements in this announcement or any changes in events, conditions or circumstances on which any such forward looking statement is based.

Exploration Announcements – Referenced

The information in this announcement that relates to previously reported results has been extracted from the following ASX announcements:

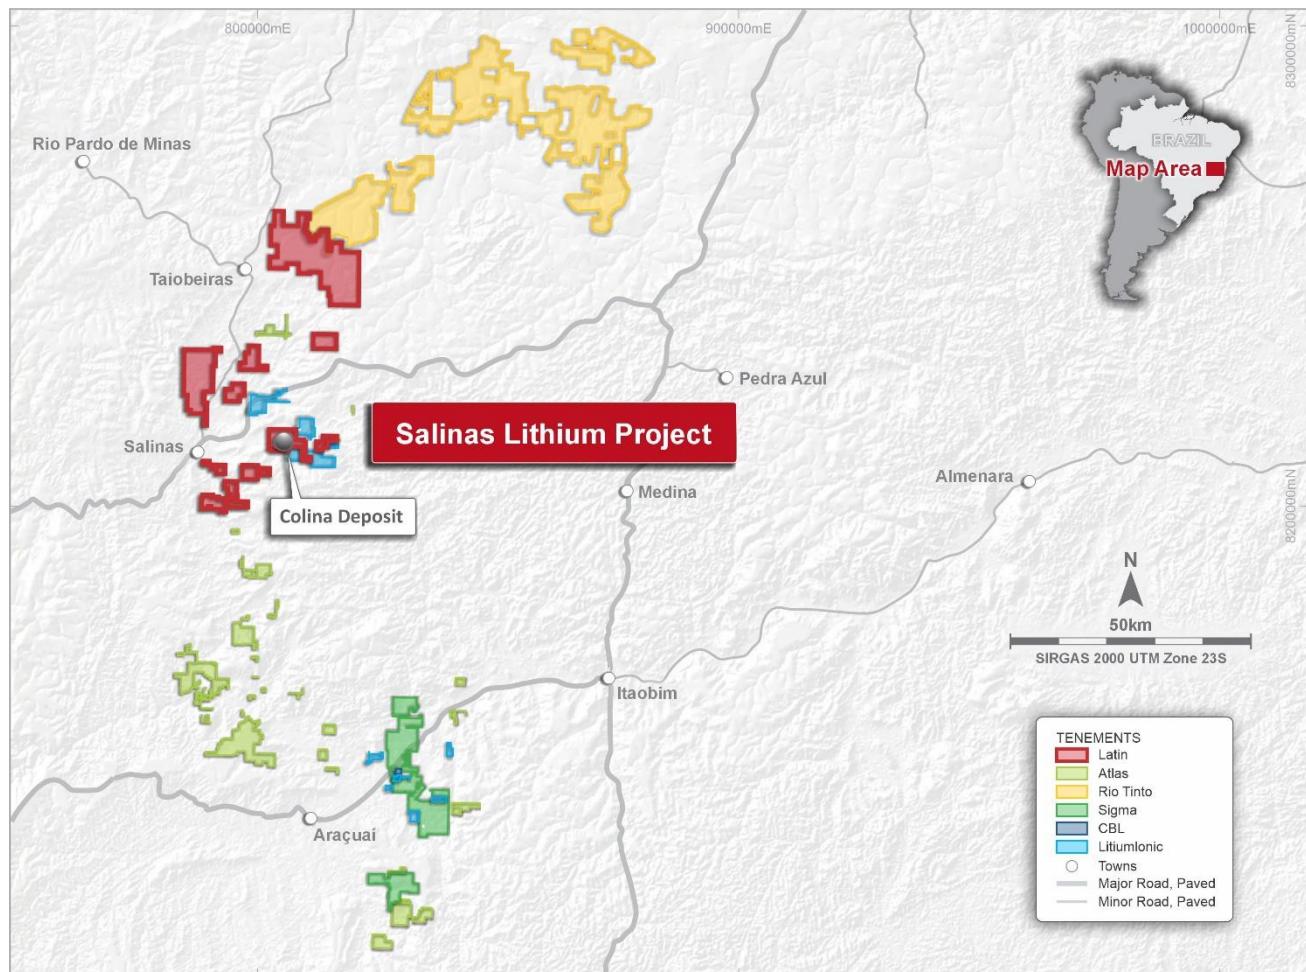

- "241% Increase for the Colina Mineral Resource", 20 June 2023; and
- "Positive DMS Test Work Demonstrates Success at Pilot Plant Scale", 10 August 2023.

- “Robust Results for Colina Lithium Project Preliminary Economic Assessment (PEA)”, 28 September 2023.

These above-mentioned announcements are available on the Company’s website.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the above market announcements, and that the form and context in which the Competent Persons findings are presented have not been materially modified from the original market announcement.

1. A nominal minimum Li₂O grade of 0.5% Li₂O has been used to define a 'significant intersection' over a nominal minimum intersection of 1.0m with a maximum internal dilution of 2.0 m.

APPENDIX E: JORC CODE, 2012 EDITION – TABLE 1 REPORT

Section 1 Sampling Techniques and Data

(Criteria In This Section Apply to All Succeeding Sections)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information. 	<ul style="list-style-type: none"> The July 2021 stream sediment sampling program was completed by Latin Resources. Latin Resources stream sediment sampling: <ul style="list-style-type: none"> Stream sediment samples were taken in the field by Latin's geologists during field campaign using pre-set locations and procedures. All surface organic matter and soil were removed from the sampling point, then the active stream sediment was collected from five holes spaced 2.5 m using a post digger. Five subsamples were collected along 25 cm depth, homogenised in a plastic tarp and split into four parts. The chosen part (1/4) was screened using a 2 mm stainless steel sieve. A composite sample weighting 350-400g of the <2 mm fraction was poured in a labelled zip lock bag for assaying. Oversize material retained in the sieve was analyzed with hand lens and discarded. The other three quartiles were discarded, sample holes were filled back, and sieve and canvas were thoroughly cleaned. Photographs of the sampling location were taken for all the samples. Sample book were filled in with sample information and coordinates. Stream sediment sample locations were collected in the field using a hand-held GPS with +/-5m accuracy using Datum SIRGAS 2000, Zone 23 South) coordinate system. No duplicate samples were taken at this stage. No certified reference standards samples were submitted at this stage. Latin Resources Diamond Drilling: <ul style="list-style-type: none"> Diamond core has been sampled in intervals of ~1 m (up to 1.18 m) where possible, otherwise intervals less than 1 m have been selected based on geological boundaries. Geological boundaries have not been crossed by sample intervals. ½ core samples have been collected and submitted for analysis, with regular field duplicate samples collected and submitted for QA/QC analysis. Metallurgical Drilling <ul style="list-style-type: none"> Latin conducted a metallurgical program on material sourced from diamond drilling in 2022 and 2023. Drillhole diameter was HQ for metallurgical drill holes. Spodumene concentrate testwork was completed on two composite samples of Colina ore. The samples comprising the composites were taken from ½ HQ core from selected mineralized and unmineralized zones as part of the 65,000m drilling program.

Drilling techniques	<ul style="list-style-type: none"> Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> Latin Resources drilling is completed using industry standard practices. Diamond drilling is completed using HQ size coring equipment. Drilling techniques used at Salinas Project comprise: <ul style="list-style-type: none"> NTW Diamond Core (64.2mm diameter), standard tube to a depth of ~200- 250 m. BTW diamond core utilized for hole SADD031 from a depth of 309.10 m. Diamond core holes drilled directly from surface. Initial drill rig alignment is carried out using Reflex TN14 alignment tool. Down hole survey was carried out by Reflex EZ-TRAC tool (SADD001 to SADD020). Down hole survey was carried out by Reflex EZ-TRAC tool (SADD001 to SADD020) and Reflex GYRO SPRINT-IQ (SADD021 to date). Core orientation was provided by an ACT Reflex (ACT III) tool. All drill collars are surveyed using RTK DGPS.
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> Latin Resources core is depth marked and orientated to check against the driller's blocks, ensuring that all core loss is taken into account. Diamond core recovery is logged and captured into the database. Zones of significant core loss may have resulted in grade dilution due to the loss of fine material.
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> All drill cores have been geologically logged. Sampling is by sawing core in half and then sampling core on nominal 1m intervals. All core sample intervals have been photographed before and after sawing. Latin's geological logging is completed for all holes, and it is representative. The lithology, alteration, and structural characteristics of drill samples are logged following standard procedures and using standardised geological codes. Logging is both qualitative and quantitative depending on field being logged. All drill-holes are logged in full. Geological structures are collected using Reflex IQ Logger. All cores are digitally photographed and stored.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> For the 2021 stream sediment sampling program: <ul style="list-style-type: none"> All samples collected from field were dry due to dry season. To maximise representativeness, samples were taken from five holes weighting around 3 Kg each for a total of 15 Kg to be reduced to 350-400 g. Samples were dried, crushed and pulverized 250g to 95% at 150#. Any samples requiring splitting were split using a Jones splitter. For the 2023 diamond drilling program: <ul style="list-style-type: none"> Samples were crushed in a hammer mill to 75% passing -3mm followed by splitting off 250g using a Jones splitter and pulverizing to better than 95% passing 75 microns. Duplicate sampling is carried out routinely throughout the drilling campaign. The laboratory will

Criteria	JORC Code explanation	Commentary
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> • The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. • For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. • Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established. 	<p>carry out routine internal repeat assays on crushed samples.</p> <ul style="list-style-type: none"> ○ The selected sample mass is considered appropriate for the grain size of the material being sampled.
Verification of sampling and assaying	<ul style="list-style-type: none"> • The verification of significant intersections by either independent or alternative company personnel. • The use of twinned holes. • Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. • Discuss any adjustment to assay data. 	<ul style="list-style-type: none"> • Selected sample results which are considered to be significant will be subjected to resampling by the Company. This can be achieved by either reassaying of sample pulps, resplitting of coarse reject samples, or resplitting of core and reassaying. • All Latin Resources data is verified by the Competent person. All data is stored in an electronic Access Database. ○ Assay data and results is reported, unadjusted. ○ Li₂O results used in the market are converted from Li results multiplying it by the industry factor 2.153.
Location of data points	<ul style="list-style-type: none"> • Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. • Specification of the grid system used. • Quality and adequacy of topographic control. 	<ul style="list-style-type: none"> • Stream sediment sample locations and drill collars are captured using a handheld GPS. • Drill collars are located using a handheld GPS. • All GPS data points were later visualized using ESRI ArcGIS Software to ensure they were recorded in the correct position. • The grid system used was UTM SIRGAS 2000 zone 23 South.
Data spacing and distribution	<ul style="list-style-type: none"> • Data spacing for reporting of Exploration Results. • Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. • Whether sample compositing has been applied. 	<ul style="list-style-type: none"> • Stream sediment samples were taken every 200m between sampling points along the drainages which is considered appropriate for a first stage, regional work. • Every sampling spot had a composite sample made of five subsamples spaced 2.5 m each along a channel for a 10 m length zone or a cross pattern with the same spacing of 2.5 m for the open valleys and braided channels.

Criteria	JORC Code explanation	Commentary
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> Due to the preliminary nature of the initial drilling campaign, drill holes are designed to test specific targets, with not set drill spacing. Sampling is preferentially across the strike or trend of mineralised outcrops. Drilling has been designed to intersect the mapped stratigraphy as close to normal as possible.
Sample security	<ul style="list-style-type: none"> The measures taken to ensure sample security. 	<ul style="list-style-type: none"> At all times samples were in the custody and control of the Company's representatives until delivery to the laboratory where samples were held in a secure enclosure pending processing.
Audits or reviews	<ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> The Competent Person for Exploration Results reported here has reviewed the field procedures used for sampling program at field and has compiled results from the original sampling and laboratory data. No External audit has been undertaken at this stage.

SECTION 2 REPORTING OF EXPLORATION RESULTS
(CRITERIA LISTED IN THE PRECEDING SECTION ALSO APPLY TO THIS SECTION.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	<ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. 	<ul style="list-style-type: none"> Exploration Licences: 830.578/2019, 830.579/2019, 830.580/2019, 30.581/2019, 830.582/2019, 830.691/2017, 832.515/2021 and the western portion of 831.799/2005 are 100% fully owned by Latin Resources Limited. Latin has lodged new applications for the following areas: 832.601/2022, 832.602/2022, 832.604/2022, 832.605/2022, 832.606/2022, 832.607/2022, 832.608/2022, 832.609/2022, 832.611/2022, 832.612/2022, 832.613/2022, 832.614/2022, 832.616/2022, 832.801/2022, 832.802/2022 & 832.804/2022. Latin has entered in separate exclusive option agreement to acquire 100% interest in the areas: 830.080/2022, 830.581/2019, 831.118/2008, 831.219/2017, 831.798/2015, 831.799/2005 (Second Part & Third Part), 833.881/2010 & 834.282/2007. The Company is not aware of any impediments to obtaining a licence to operate, subject to carrying out appropriate environmental and clearance surveys.
Exploration done by other parties	<ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. 	<ul style="list-style-type: none"> Historic exploration was carried out on the area 830.080/2022 (Monte Alto) with extraction of gems (tourmaline and lepidolite), amblygonite, columbite and feldspar.
Geology	<ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. 	<ul style="list-style-type: none"> Salinas Lithium Project geology comprises Neoproterozoic age sedimentary rocks of Araçuaí Orogen intruded by fertile Li-bearing pegmatites originated by fractionation of magmatic fluids from the peraluminous S-type post-tectonic granitoids of Araçuaí Orogen. Lithium mineralisation is related to discordant swarms of spodumene-bearing tabular pegmatites hosted by biotite-quartz schists.
Drill hole Information	<ul style="list-style-type: none"> A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. 	<ul style="list-style-type: none"> All drill hole summary location data is provided in Appendix 1 to this report and is accurately represented in appropriate location maps and drill sections where required.
Data aggregation methods	<ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high-grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of 	<ul style="list-style-type: none"> Sample length weighted averaging techniques have been applied to the sample assay results. Where duplicate core samples have been collected in the field, results for duplicate pairs have been averaged. A nominal minimum Li₂O grade of 0.4% Li₂O has been used to define a 'significant intersection'. No grade top cuts have been applied.

Criteria	JORC Code explanation	Commentary
	<p><i>low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></p> <ul style="list-style-type: none"> <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i> 	
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> <i>These relationships are particularly important in the reporting of Exploration Results.</i> <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i> <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').</i> 	<ul style="list-style-type: none"> <i>Drilling is carried out at right angles to targeted structures and mineralised zones where possible.</i> <i>Drill core orientation is of a high quality, with clear contact of pegmatite bodies, enabling the calculation of true width intersections.</i>
Diagrams	<ul style="list-style-type: none"> <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i> 	<ul style="list-style-type: none"> <i>The Company has released various maps and figures showing the sample results in the geological context.</i>
Balanced reporting	<ul style="list-style-type: none"> <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high-grades and/or widths should be practised avoiding misleading reporting of Exploration Results.</i> 	<ul style="list-style-type: none"> <i>All analytical results for lithium have been reported.</i>
Other substantive exploration data	<ul style="list-style-type: none"> <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i> 	<ul style="list-style-type: none"> <i>All information that is considered material has been reported, including stream sediment sampling results, Drilling results geological context, etc.</i> <i>Sighter metallurgical test work was undertaken on approximately 44kg of drill core sourced from drill hole SADD023 (26.99m: 94.00-120.88m) and submitted to independent laboratories SGS GEOSOL Laboratories in Belo Horizonte Brazil.</i> <i>Test work included crushing, size fraction analysis and HLS separation to ascertain the amenability of the Colina Project spodumene pegmatite material to DMS treatment routes.</i>
Further work	<ul style="list-style-type: none"> <i>The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling).</i> <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i> 	<ul style="list-style-type: none"> <i>Latin plans to undertake additional reconnaissance mapping, infill stream sediment and soil sampling at Salinas South Prospect.</i> <i>Follow-up infill and step-out drilling will be undertaken based on results.</i> <i>Additional metallurgical processing test work on drill core from the Colina Prospect.</i>
